1) Distribution The original place is located in East Asia. In Russia, the mandarin duck breeds in the Amur and Sakhalin regions (between Sakhalin and Primorsky Krai), on the Korean Peninsula, and in the Korean Peninsula. It is also developed in the Japanese archipelago. The habitat is the forest. The male makes a call to the female. The female flies away to make a nest. The place of the nest is in the forest. The life expectancy in nature is up to 10 years. In captivity, it is much longer, sometimes 25 years.

2) Deforestation. Ducks build their nests in tree holes at a height of no more than 15 meters. Do not nest in the same place twice.

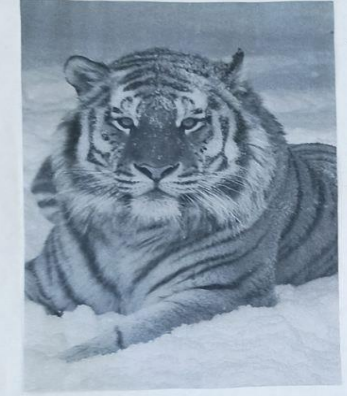

- 1) He lives in Mednovsky Island, which is located in the Bering Sea.
- 2) The blue fox lives an average of 12 years.
- 3) They did not disappear from the face of the earth.
- 4) Because of the crooked fur and the disease, ear scabies, that is fatal for them.

## Endangered Animals

# Amur Tiger

Currently, 95 percent of the total Amur tiger population lives in the Russian Far East, 5 percent in China. Life expectancy depends on conditions. In captivity, the animal lives up to 20 years.

One of the main reasons for the disappearance of the Amur tigers was the destruction of natural habitats and the destruction of the food base. These large predators need rather vast hunting territories of about 100 km<sup>2</sup>, and poaching is a factor.

PROTECT THE NATURE AND PROTECT ANIMALS

The Amur tiger

**Introduction** The Amur tiger is one of the rarest types of predators. Back in the 19th century, there were quite a lot of them. However, due to poachers, in the 20th century, the species was on the verge of complete extinction. At that time only 30 individuals remained on the territory of the Soviet Union. During the expedition of 2002-2003, a special expedition "Amur Tiger" was held. It was established that within the boundaries where he lives. Currently, 95% of the entire population of the Amur tiger lives in the Far East of Russia. 5% - there were only 5 tigers.

**Size** The length of the body of the Amur tiger without a tail is 2.5-3.0 m, the length of the tail is about 1.0 m. The weight of an adult animal can reach 300 kg. The largest recorded mass of a tiger is 363 kg.

**Life expectancy** In the wild, it is 10-15 years old, in captivity up to 25 years.
